Introduction

Woodvale Construction Company has grown substantially since their foundation in 1980. They are renowned as being one of the leading construction companies in Ireland, with a reputation for innovation and quality driving this success and in doing so it positions them as a forerunner in the modern construction market. They believe excellent communication across all stakeholders and better consistency and reliability of information throughout all projects is key in the construction industry of today.

The company has offices located in Northern Ireland and England, offering innovative solutions, covering a wide range of specific construction requirements and has expertise in many sectors from schools to civic buildings, offices to high tech industrial facilities and hotels to historic restoration projects.

Woodvale Construction Company is renowned in the industry for their knowledge and professionalism. They have gathered a vast amount of accreditation and certifications of excellence through the years gaining many awards.

The Challenge

One of the major common challenges in the construction industry is the fragmentation of information between parties. This can lead to a silo mentality amongst project team members and the supply chain. Reducing this was a key area which we needed to address, we wanted all stakeholders to work collaboratively in a common data environment through a BIM mindset.

The Solution

After reviewing the market for BIM software applications, Woodvale Construction settled on Sherlayer. The pricing was extremely competitive, the functionality covered all that was needed and above all it was very user friendly.

Working Efficiently and Collectively

Woodvale Construction are currently using Sherlayer for a key project, Strabane Academy school in County Tyrone. James O'Neill, BIM Manager confirmed "We have found that by using Sherlayer, our workflows have improved considerably, with easier access to documents, reducing our need for paper plans on site, digital snagging of drawings, and utilising the integrated 3D model viewer for visualisation and contextual information."

He continued, "One of the major key benefits of having Sherlayer, is by sharing all this information as the ultimate source of truth, facilitated better co-ordination for our supply chain and project team members, reducing time and cost for our projects."

Building Long-term Business Relationships

When an agreed workflow was fully developed Woodvale Construction found that Sherlayer worked seamlessly with their expectations. "the support we have received from Sherlayer has been exceptional, nothing has been too much trouble." James confirmed, "Now that our workflow has been established and tried and tested, it can easily integrate with our next BIM project, and we look forward to using Sherlayer with that and many more"

The user interface system is simplistic and intuitive in design which created a reduced barrier to entry for all stakeholders to navigate, upload and share information.

The Result

Woodvale Construction have been delighted with the benefits Sherlayer has provided to their business. The sharing and transparency of information in Sherlayer, facilitates and promotes collaboration and coordination which is crucial for any project.

"The support we have received from Sherlayer has been exceptional, nothing has been too much trouble." James confirmed, "Now that our workflow has been established and tried and tested, it can easily integrate with our next BIM project, and we look forward to using Sherlayer with that and many more"
